CARING

Enhancing Open Data Quality through Community Engagement

Christopher
Klamm

Bach

Tornike
Tsereteli

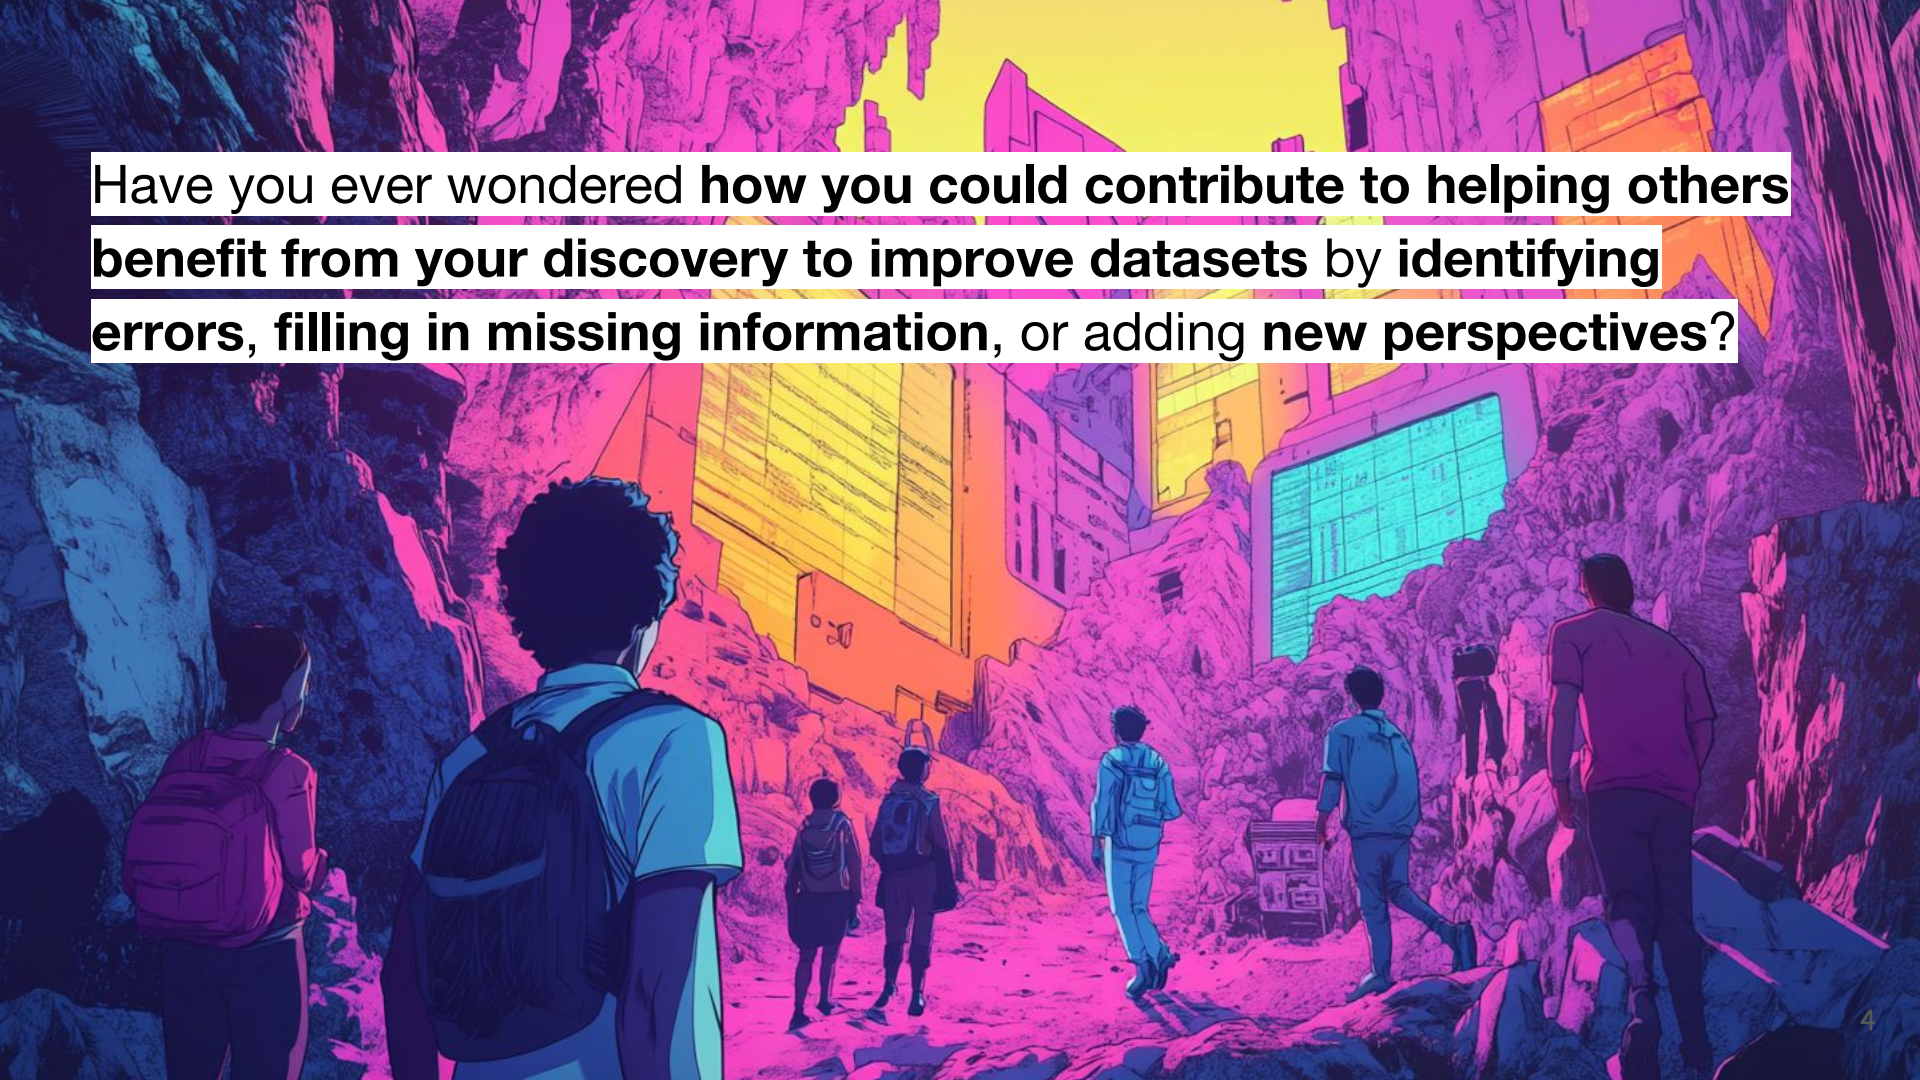

**Exploring a dataset can be
a challenging adventure.**

Exploring a dataset can be a challenging adventure.

But we learn a lot from the dataset and also a lot from its limitations.

Have you ever wondered **how you could contribute to helping others benefit from your discovery to improve datasets by identifying errors, filling in missing information, or adding new perspectives?**

CARING

- **open platform** transforming datasets into dynamic entities
- reducing barriers to **dataset improvement participation**
- providing **incentives** for ongoing dataset enhancements

Project

Everyone working with datasets should have an easy way to CARE about and improve them.

-  **Conduct a design thinking workshop** with data experts to reimagine incentives and reduce barriers for diverse user needs
-  Develop an **open intuitive platform** that enables open collaboration to create a community, allowing anyone to improve dataset quality
-  Implement a **versioning and quality control system** to track and validate dataset enhancements
